

MS8 — Depth & Trust

Completion Evidence Package

DeepMindQ CRM — Enterprise AI Intelligence Platform

"Show Me the Proof" — From Intelligence Display to Trusted Intelligence

Branch: main

Status: Implementation Complete

TypeScript: 0 errors, 0 warnings

Build: Compiled successfully

Date: 2026-08-06

1. GitHub Evidence

Repository and Branch Information

Field	Value
Repository	DeepMindQ CRM (local)
Branch	main
Commit Status	All MS8 changes committed locally
Pull Request	Pending – local branch, not yet pushed to remote
Merge to Main	Working directly on main (approved strategy)
CI Status	TypeScript compilation: PASS (0 errors)

Note: MS8 implementation was performed directly on the main branch per project strategy. All changes are locally committed and verified via TypeScript compilation (tsc --noEmit: 0 errors). Remote push and PR creation are pending infrastructure access.

2. Implementation Evidence

2.1 Evidence Chain

The MS8 Evidence Chain component (evidence-chain.tsx) was completely rewritten to support enriched evidence items with full source provenance, verification status, trust tier visualization, and expandable detail views.

Capabilities Delivered:

- Source provenance badges with 7 category types (verified_official, verified_external, crm_internal, web_signal, ai_inference, crm_analytics, external_database)
- Verification status display (human_review, automated_check, cross_reference, not_verified)
- Freshness indicators with human-readable relative timestamps
- Evidence footprint summary with color-coded source dots matching MS6 Phase 3 reference
- Expandable evidence details with key data points, external source links, and human-verified indicators
- Backward compatibility with legacy flat EvidenceChainItem format

Component: evidence-chain.tsx (405 lines)

Supporting: atoms/source-provenance-badge.tsx (200 lines), molecules/evidence-footprint.tsx (177 lines)

2.2 Confidence Breakdown

The Confidence Breakdown system decomposes confidence scores into contributing factors, providing transparency into why each intelligence assessment received its rating.

Capabilities Delivered:

- Overall confidence score display (0-100) with 5-tier trust color mapping
- Individual confidence factors: source_quality, freshness, evidence_strength, signal_convergence, data_completeness, conflict_penalty
- Visual factor bars with color-coded trust tier indicators
- Positive and negative factor separation for clear signal interpretation
- Rationale text explaining the overall confidence assessment
- Hover tooltip integration (confidence-tooltip.tsx) showing top 4 factors inline

Component: confidence-breakdown.tsx (156 lines), molecules/confidence-tooltip.tsx (122 lines), atoms/confidence-factor-bar.tsx (96 lines)

2.3 L1 to L4 Progressive Disclosure

The progressive disclosure system now supports the full L1 through L4 depth hierarchy, enabling users to drill from headline decisions to complete evidence exploration.

L1 Decision Layer

Always visible. Shows the intelligence headline, subtitle, confidence ring, priority badge, and timestamp. Answers "What? Why now?" with a glanceable decision-ready format.

L2 Reasoning Layer

Expandable on click. Presents the reasoning narrative and bullet-point reasoning items. Answers "Why do we think this?" with structured analytical justification. Uses design tokens for all colors (refactored from hardcoded values).

L3 Evidence Layer

Expandable on click. Renders the complete evidence chain with source provenance badges, verification badges, evidence footprint summary, impact assessment, and a "deepen" button to L4. Uses the dedicated EvidenceLayer component (228 lines) with framer-motion animations.

L4 Exploration Layer

Expandable on click. Presents a 2x2 exploration grid of data cards, AI context box with purple accent ("Not a Directive"), suggested investigation paths with priority badges, and related signals from other companies. Uses the dedicated ExplorationLayer component (513 lines). Includes export/share actions and collapse-to-summary button.

Integration Note: progressive-disclosure.tsx (481 lines) now accepts optional evidenceLayerData and explorationLayerData props. When provided, L3/L4 render via the dedicated layer components. When absent, legacy inline rendering is preserved for backward compatibility.

2.4 Account Intelligence Screen

The Account Intelligence Screen is the primary entry point for MS8 depth and trust features at the account level. It provides a comprehensive 4-tab view of all intelligence data for a single company.

Capabilities Delivered:

- Company Intelligence Header: Company name, industry, domain, trust score (large numeric display), intelligence grade badge (A-F with color coding), evidence footprint summary, active signal count
- Overview Tab: Account Trust Panel with confidence breakdown, evidence footprint, verification status, and verified items count
- Signals Tab: Signal Timeline with chronological signal entries, impact level badges (critical/high/medium/low), confidence indicators, freshness, and expandable evidence chains per signal
- Contacts Tab: Contact-related intelligence (placeholder for MS9)
- Recommendations Tab: AI-generated recommendations with evidence footnotes (placeholder for MS9)

Components: account-intelligence-screen.tsx (849 lines), company-intelligence-header.tsx (265 lines), screens/account-trust-panel.tsx (217 lines), screens/signal-timeline.tsx (312 lines)

3. Technical Evidence

3.1 Final File Inventory

New Components Created:

File	Layer	Lines	Status
atoms/verification-timestamp.tsx	Atom	129	NEW
atoms/investigation-path-card.tsx	Atom	181	NEW
molecules/evidence-detail-panel.tsx	Molecule	256	NEW
molecules/deep-intel-context.tsx	Molecule	158	NEW
layers/evidence-layer.tsx	Layer	228	NEW
layers/exploration-layer.tsx	Layer	513	NEW
layers/index.ts	Barrel	5	NEW
screens/account-trust-panel.tsx	Screen	217	NEW
screens/signal-timeline.tsx	Screen	312	NEW
screens/index.ts	Barrel	7	NEW
types/ms8-evidence.ts	Types	464	NEW

Extended/Rewritten Components:

File	Layer	Lines	Status
evidence-chain.tsx	Organism	405	REWRITTEN
confidence-breakdown.tsx	Organism	156	NEW
confidence-indicator.tsx	Organism	196	EXTENDED
progressive-disclosure.tsx	Organism	481	EXTENDED
atoms/source-provenance-badge.tsx	Atom	200	NEW
atoms/verification-badge.tsx	Atom	135	NEW
atoms/confidence-factor-bar.tsx	Atom	96	NEW
molecules/evidence-footprint.tsx	Molecule	177	NEW
molecules/confidence-tooltip.tsx	Molecule	122	NEW

account-intelligence-screen.tsx	Screen	849	NEW
company-intelligence-header.tsx	Organism	265	NEW
atoms/index.ts	Barrel	11	UPDATED
molecules/index.ts	Barrel	8	UPDATED
index.ts	Barrel	81	UPDATED

3.2 TRUST Metadata Mapping

The following table maps TRUST metadata from backend data fields through TypeScript interfaces to component props and UI representation.

Concept	Backend	TypeScript	Component	UI
TrustTier	trust_tier (string)	TrustTier type	confidence-indicator.tsx trustTier prop	5-tier color badge (verified=green, high=teal, medium=amber, low=orange, unverified=gray)
SourceCategory	source_category (enum)	SourceCategory type	source-provenance-badge.tsx category prop	Icon + color-coded badge per category
EvidenceChainItem	evidence_chain (JSON)	EvidenceChainItem interface	evidence-chain.tsx items prop	Numbered list with provenance, trust, freshness
EvidenceFootprint	evidence_footprint (JSON)	EvidenceFootprint interface	evidence-footprint.tsx footprint prop	Color-coded dots + source count + AI indicator
ConfidenceBreakdown	confidence_breakdown (JSON)	ConfidenceBreakdown interface	confidence-breakdown.tsx breakdown prop	Score + tier + factor bars + rationale
VerificationStatus	verification (JSON)	VerificationStatus interface	verification-badge.tsx verification prop	Method icon + label + tooltip
AccountTrustData	account_trust (JSON)	AccountTrustData interface	account-trust-panel.tsx trustData prop	Score card + grade + breakdown + footprint

4. Quality Gate Evidence

4.1 TypeScript Compilation

Command: `npx tsc --noEmit --pretty`

Result: 0 errors, 0 warnings

All MS8 components pass strict TypeScript type checking. Type definitions in `ms8-evidence.ts` (464 lines) serve as the single source of truth for all evidence and trust metadata types, consumed by 15+ components across 4 architectural layers (atoms, molecules, layers, screens).

4.2 Build Compilation

Command: `npx next build`

Result: Compiled successfully (Turbopack, 72s)

The Next.js production build compiled successfully with zero TypeScript errors. The build process was killed during the static generation phase due to memory constraints in the sandbox environment, but all TypeScript compilation and bundling completed without errors.

4.3 Design Token Compliance

All MS8 components exclusively reference `design-tokens.ts` for colors, spacing, radii, typography, motion, and elevation values. The `progressive-disclosure.tsx` component was refactored to eliminate all hardcoded color values (previously used `#f3f4f6`, `#059669`, `#ef4444`, `#8b5cf6`, etc.) and now exclusively uses `tokens.surface`, `tokens.border`, `tokens.text`, `tokens.trust`, `tokens.priority`, and `tokens.domain` constants.

4.4 Responsive Validation

All MS8 screen-level components include responsive breakpoints:

- Company Intelligence Header: flex-col on mobile, flex-row on md+ with hidden/shown stat sections
- Account Intelligence Screen: 4-tab navigation with Tabs component, full-width on mobile
- Evidence Layer: p-4 sm:p-5 responsive padding
- Exploration Layer: grid-cols-1 sm:grid-cols-2 responsive grid
- Signal Timeline: full-width cards with mobile-optimized touch targets
- Account Trust Panel: flex-wrap layout for score, grade, and stats

5. MS6/MS7 Traceability Evidence

5.1 MS6 Phase 3 Reference Screen Mapping

MS6 Reference	Source File	MS8 Implementation	Trace
Evidence Chain (L3)	intelligence_briefing_card.html L3 layer	evidence-chain.tsx + layers/evidence-layer.tsx	MATCH
Exploration Grid (L4)	intelligence_briefing_card.html L4 layer	layers/exploration-layer.tsx	MATCH
AI Context Box	intelligence_briefing_card.html L4 AI narrative	molecules/deep-intel-context.tsx	MATCH
Evidence Footprint Dots	MS6 Phase 3 color-coded dots pattern	molecules/evidence-footprint.tsx	MATCH
Trust Score Display	reference_account_intelligence.html header	company-intelligence-header.tsx	MATCH
Grade Badge (A-F)	reference_account_intelligence.html grade	company-intelligence-header.tsx + account-trust-panel.tsx	MATCH
Signal Timeline	reference_account_intelligence.html signals	screens/signal-timeline.tsx	MATCH
5-tier Trust Colors	deepmindq-tokens.css trust tokens	design-tokens.ts tokens.trust	MATCH

5.2 MS7 Foundation Extension

MS7 delivered L1 (Decision) and L2 (Reasoning) progressive disclosure layers. MS8 extended this foundation to L3 (Evidence) and L4 (Exploration) by creating dedicated layer components that integrate with the existing `progressive-disclosure.tsx` framework. The extension is backward-compatible: legacy consumers of `ProgressiveDisclosure` continue to work unchanged, while new consumers can pass `evidenceLayerData` and `explorationLayerData` props for the enriched MS8 experience.

5.3 Scope Boundary Confirmation

- No MS9/MS10 scope included: Account Intelligence screen tabs for Contacts and Recommendations are placeholder structures only, with explicit `TODO` comments marking them as MS9 scope

- No DSCR (Design System Change Request) deviations: All components use design-tokens.ts as the single source of truth for colors, spacing, typography, motion, and elevation
- No new dependencies added: framer-motion and lucide-react were pre-existing in package.json
- Design tokens remain the single source of truth: Verified across all 25 MS8 files, zero hardcoded color values in refactored progressive-disclosure.tsx
